DAILY CVE HIGHLIGHT

Daily CVE highlight

26 November 2026 · 3 new critical CVEs worth reading

Analysis Report

151 new records scored 8 or higher in the last 30 hours. 3 to read first, and the conditions each score leaves out.

PREPARED BY	NamiQ	DATE	26 November 2026
FACTS AS OF	26 November 2026	VERSION	1.0
TOP SCORE	Critical: 10.0	STATUS	Not on CISA's exploited list; exploitation not recorded

The bottom line

> *3 new records scored 8 or higher and nothing says yet that anyone is using them. If you run any of these products, check the version today.*

775 CVE records were published in the last 30 hours. 151 scored 8 or higher. 3 are below, chosen by a fixed rule: highest score first, then fewest conditions in the wording, one product each. None is on CISA's exploited list, so a score here is the record's author describing the worst case. Read the condition before you act on the number.

At a glance

Product	Score	Fixed in	Read next
D-Link R32 (CVE-2026-136823)	10 (CVSS 4.0)	The record lists no unaffected or fixed release. No vendor advisory page was readable. The fixed version is not known.	Technical Analysis
TOTOLINK N350RT (CVE-2026-137043)	10 (CVSS 4.0)	See the note	Technical Analysis
Apache Software Foundation Apache JSPWiki (CVE-2026-78114)	10 (CVSS 4.0)	3.0.1 for 3.x users, or 2.12.6 for 2.x users. The record names both as the fix.	Technical Analysis

D-Link R32, CVE-2026-136823

The record scores this at 10, the maximum under CVSS 4.0, and the exploit is public. No fixed firmware is recorded; anyone running a D-Link R32 on firmware 1.10B02 should block remote access to the management interface now and check for a D-Link update.

Score 10 (CVSS 4.0), published by VulDB on 25 November 2026. Weakness: CWE-78, CWE-77.

A word search of the record found none of the usual conditions (privileges, a logged-in user, a non-default setting, local network, physical access, a click). That is a search, not a reading, so read the record yourself before you rule it out.

TOTOLINK N350RT, CVE-2026-137043

Anyone running a TOTOLINK N350RT on firmware 9.3.5u.6466_B20250825 or 9.3.5u.6468_B20250827 should act now: the exploit is public and the record scores this 10 out of 10.

First, check whether the router's management interface is reachable from outside your internal network.

Score 10 (CVSS 4.0), published by VulDB on 26 November 2026. Weakness: CWE-639, CWE-285.

A word search of the record found none of the usual conditions (privileges, a logged-in user, a non-default setting, local network, physical access, a click). That is a search, not a reading, so read the record yourself before you rule it out.

Apache Software Foundation Apache JSPWiki, CVE-2026-78114

Anyone running Apache JSPWiki version 2.10 through 3.0.0 should upgrade now; the record carries a CVSS 4.0 score of 10, the maximum. The first step is to upgrade to 3.0.1 (3.x) or 2.12.6 (2.x) as the record states.

Score 10 (CVSS 4.0), published by Apache on 25 November 2026. Weakness: CWE-384.

Conditions the score may not show: authenticated.

Fifteen minutes this morning

- List the products above you run. If none, you are done.
- For each one you run, read the version from the product and compare it to the fixed version in the table.
- If it is in range, follow the note: reduce exposure first, then update.
- Book the update, and write down who owns it and by when.

Check your own project

If you build software, you can compare what a project declares with these CVEs from a terminal. The tool reads requirements files, package.json, Maven, Gradle, Cargo, CMake and Dockerfile files, runs nothing, and only the CVE ids leave your machine. Naming the CVEs needs no key.

```
lattice-scan project . --cve CVE-2026-136823,CVE-2026-137043,CVE-2026-78114
```

Each row says in-range, outside-range, undetermined or lead, with the file and line. That is evidence about what a manifest declares, not about what runs, and a person decides. The verdicts, the CSV columns and a pipeline recipe are in the guide.

Check the servers you run

The same ids can be checked against a host. Run this on the machine itself, not on the laptop that deploys to it: it reads installed packages (dpkg, rpm or apk), snaps, the hardware (maker, model, firmware), the running container images with their operating system and packages, and the kernel version, compares them on the spot, and only the CVE ids leave the machine; the inventory stays on

it, in ~/.lattice-scan. Naming the CVEs needs no key. Do it on each server after a deployment, and again when a new entry lands.

```
lattice-scan --cve CVE-2026-136823 --cve CVE-2026-137043 --cve CVE-2026-78114
```

A match is a candidate for a person to confirm, not a finding. A distribution can fix a CVE under an unchanged version number, so a match is a candidate; on Debian-family hosts the report also shows whether the package's own changelog names the CVE. By default it opens the images your containers are running and reads their operating system and package list; a deep scan (--deep, a few minutes) opens every local image and the Python, Node, Java and Ruby packages inside them; for what an image declares, use the project check on its Dockerfile.

Guide: namiq.io/lattice/guides/choose-your-channel. MCP server (io.namiq/lattice in the MCP registry): namiq.io/lattice. Package: pypi.org/project/lattice-scan, or namiq.io/apt.

What we do not know yet

- These are new records. A record can change in the first days: scores, versions and wording are as at 26 November 2026. Nothing here has been tested.
- Exploitation is not recorded for any of them. That is not the same as none.

Appendix 1. Severity decoded

CVE-2026-136823: score 10, `CVSS:4.0/AV:N/AC:L/AT:N/PR:N/UI:N/VC:H/VI:H/VA:H/SC:H/SI:H/SA:H/E:P`

Metric	Value	What it means here
Attack vector	Network	Reachable over a network, with no need to be on the same segment.
Attack complexity	Low	No special conditions beyond the flaw itself.
Attack requirements	None	Works against a default deployment.
Privileges required	None	No account is needed.
User interaction	None	No one has to do anything.
Vulnerable system: confidentiality	High	Total loss of confidentiality.
Vulnerable system: integrity	High	Total loss of integrity.
Vulnerable system: availability	High	Total loss of availability.
Subsequent systems: confidentiality	High	Total loss of confidentiality.
Subsequent systems: integrity	High	Total loss of integrity.
Subsequent systems: availability	High	Total loss of availability.

CVE-2026-137043: score 10, `CVSS:4.0/AV:N/AC:L/AT:N/PR:N/UI:N/VC:H/VI:H/VA:H/SC:H/SI:H/SA:H/E:P`

Metric	Value	What it means here
Attack vector	Network	Reachable over a network, with no need to be on the same segment.
Attack complexity	Low	No special conditions beyond the flaw itself.
Attack requirements	None	Works against a default deployment.
Privileges required	None	No account is needed.
User interaction	None	No one has to do anything.
Vulnerable system: confidentiality	High	Total loss of confidentiality.
Vulnerable system: integrity	High	Total loss of integrity.
Vulnerable system: availability	High	Total loss of availability.

Subsequent systems: confidentiality	High	Total loss of confidentiality.
Subsequent systems: integrity	High	Total loss of integrity.
Subsequent systems: availability	High	Total loss of availability.

CVE-2026-78114: score 10, `CVSS:4.0/AV:N/AC:L/AT:N/PR:N/UI:N/VC:H/VI:H/VA:H/SC:H/SI:H/SA:H`

Metric	Value	What it means here
Attack vector	Network	Reachable over a network, with no need to be on the same segment.
Attack complexity	Low	No special conditions beyond the flaw itself.
Attack requirements	None	Works against a default deployment.
Privileges required	None	No account is needed.
User interaction	None	No one has to do anything.
Vulnerable system: confidentiality	High	Total loss of confidentiality.
Vulnerable system: integrity	High	Total loss of integrity.
Vulnerable system: availability	High	Total loss of availability.
Subsequent systems: confidentiality	High	Total loss of confidentiality.
Subsequent systems: integrity	High	Total loss of integrity.
Subsequent systems: availability	High	Total loss of availability.

Appendix 2. Timeline

Date	Event
25 November 2026	D-Link R32, CVE-2026-136823: record published by VulDB.
26 November 2026	TOTOLINK N350RT, CVE-2026-137043: record published by VulDB.
25 November 2026	Apache Software Foundation Apache JSPWiki, CVE-2026-78114: record published by Apache.

Appendix 3. Definition of done

- The products above you run are listed, with versions.
- Each in range has the vendor's fixed version and mitigation noted.
- The update is booked, with an owner and a date.
- Anything not in range is recorded as checked.
